

## HOT TUB WINTERIZATION

One day prior to your winterization appointment, the customer is advised to apply **Club Pro Whirlpool Rinse** to the water as this product effectively degreases and removes harmful residue from the internal plumbing system of your Hot Tub.

1. Shut all power off to the Hot Tub
2. Remove all water and blow out lines
3. Undo unions from jet pumps
4. Remove water from pump/pumps
5. Pour anti-freeze into pump heads
6. Re-install and tighten pump unions
7. Remove all filters and fittings if applicable
8. Wipe down shell and vacuum water remaining in the Hot Tub
9. Pour full bottle of anti-freeze into filter down stem and system
10. Add 1" of anti-freeze to foot well
11. Prop up cover bi-fold hinge to allow air circulation
12. Once Pioneer has completed the Winterization of your Hot Tub, we recommend applying **Club Pro Surface Cleaner** and polish to the acrylic or fiberglass shell. This product is specifically formulated to clean and polish the surface for added protection

**Note:** Please be aware that any moisture that accumulates in the Hot Tub can cause a buildup of mold or other forms of fungus on the shell. To prevent this, open the cover and allow shell to dry fully if moisture accumulates after winterization.

### SPA START UP

1. 12 hours before start up, we recommended soaking your spa filters in **Club Pro Cartridge Filter Cleaner**. This product removes grease, body oils, and scale from spa filters that may have accumulated from previous Hot Tub use
2. Unclip cover locks and open cover
3. Insert garden hose into filter down stem – if tub has multiple filters ensure hose is inserted into grey down stem tube, as this leads directly to the circulation pump
4. Turn on garden hose and continue to fill spa using this method until water level is at operating level
5. Re-install filters
6. Turn breakers on and plug in Hot Tub
7. Cycle through jet settings to ensure everything is operational
8. Set water temperature and allow 24 - 48 hours for water to heat

**Note:** The anti-freeze used during closing is safe to swim with and does not need to be removed before use.

If tub has been winterized for more than one season, fill tub as instructed above and apply the **Club Pro Whirlpool Rinse** to the water as this product effectively degreases and removes harmful residue from the internal plumbing system.
